

Currently only for Windows

# Stocks<sup>2</sup>

An online stock trading community software

## Getting Started

Download the repository from

`https://github.com/blackemr/stocksSquared2`.

**Note:** If you receive an error regarding `npm` not being found anywhere, you'll need to install Nodejs from

`https://nodejs.org/en/`.

This is because not all servers come preinstalled with Nodejs.

Similarly, you might also need to install Composer. This can be done by executing the following the steps for the current version of composer:

`https://getcomposer.org/download/`

Afterward, go to Localhost and create a new table named `stocks_squared`.

Open up your command prompt and navigate to the project's root directory.

Enter the command,

```
php artisan migrate:fresh
```

This will drop each of the existing tables and give you a clean set of tables.

```
php artisan serve
```

This will start the local development server to view the site.
