

# Stocks<sup>2</sup>

An online stock trading community software

## all.js

This document serves as brief documentation for the all.js node, which contains the bulk of the website's filtering functionality. The user may view all trades, or filter by a single type: Day, Swing, or Position.

## Hiding Trades

When filtering out certain types of trades, the all.js file finds all non-relevant strategies and hides their card(s) from being displayed to the user.

## Showing Trades

When reverting hidden trades by utilizing new filtering criteria, the all.js file finds all relevant strategies and redisplay their card(s) to the user.
